

Conditional text in FrameMaker

Making manuals modular

Yvonne DeGraw

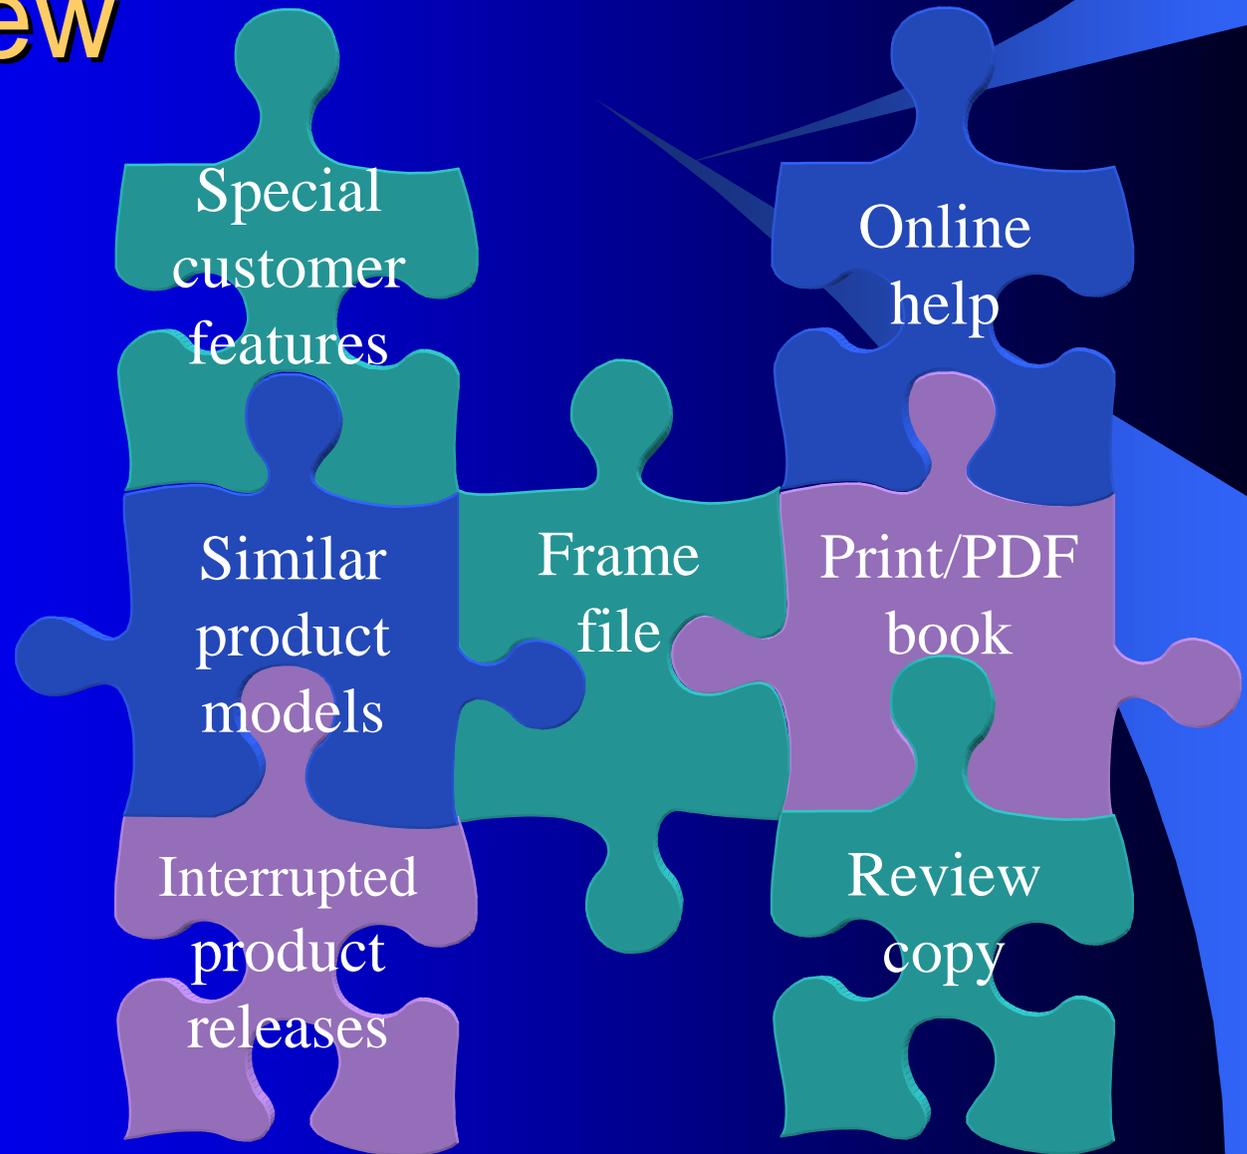

Introduction

- Really useful FrameMaker feature
- Allows you to create multiple books or other documents from one Frame book

Agenda

- Benefits of conditionals
- Planning conditional use
- Using conditionals

Overview

Benefits

- Reduce work when updating manuals
- Reduce number of source files
- Customize output for customer needs
- Facilitate technical reviews

Planning conditional use

- Examine similarities and differences between content
 - Related hardware, but different models
 - Product has different functionality set for various customers
 - New release version
 - Source code control
 - FrameMaker conditionals
 - Different media: PDF/print vs. online help

Planning conditional use

- Examine size of differing content
 - Particular words, such as model number:
use variable
 - Entire chapter: use separate book files
pointing to subsets of chapters
 - Somewhere between: use conditionals

Planning conditional use

- How many versions of the finished document?
 - Print and online help
 - Product shipped with and without KitchenSink feature
 - V3.0 and V4.0 exist and have been released. Future versions may be V3.1 and V4.1.

How many conditions?

- Print and online help

- Print

- Online

The online help This help system contains...

How many conditions?

- Product shipped with and without KitchenSink feature

KitchenSink

NoKitchenSink

The KitchenSink allows you to... This system does not include the KitchenSink. To order, please contact your sales rep.

How many conditions?

- V3.0 and V4.0 exist and have been released. Future versions may be V3.1 and V4.1.

V3

V4

To tweak the frabnitz, **do it the hard way.**
use the nifty wizard.

How many conditions?

- You have questions for a technical reviewer that you want shown only in the review copy
 - Comment

Turn the frabnitz clockwise. Is clockwise correct? I'm guessing here.

Dealing with multi-dimensional conditions

- Don't apply two conditions to same text
- If you apply both Print and KitchenSink:
 - Might expect this behavior:
Shown if *both* Print *and* KitchenSink is set
 - Actual behavior:
Shown if *either* Print *or* KitchenSink is set

How many conditions?

- Print and online versions both with KitchenSink and without (4 versions = up to 8 conditions)

| | Print | Online |
|---------------------------|------------------------------------|-------------------------------------|
| <u>KitchenSink</u> | <u>Print</u> <u>KitchenSink</u> | <u>Online</u> <u>KitchenSink</u> |
| <i>No KitchenSink</i> | <i>Print No KitchenSink</i> | <i>Online No KitchenSink</i> |

Things to standardize

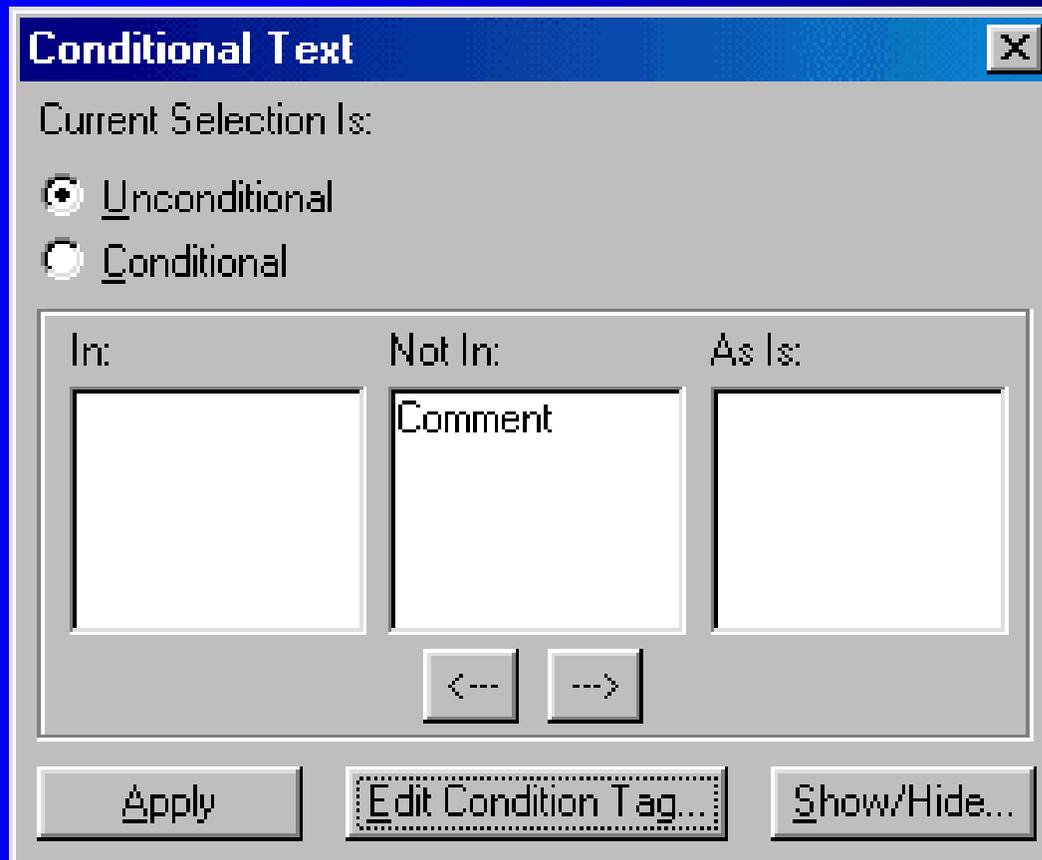

- Condition naming
 - What's included when this condition is on?
- Variables vs. conditionals
- Conditionalizing punctuation and spaces
- Sequence of conditionals in text

Using conditionals

- Working with conditions
- Creating a condition
- Viewing and hiding conditions
- Viewing conditional settings
- Applying a condition
- Removing all conditions
- Searching for conditions
- Working with conditional documents

Working with conditions

- Special → Conditional Text

Working with conditions

- Columns: In, Not In, As Is
- Think of: Yes, No, Maybe

Current Selection Is:

Unconditional

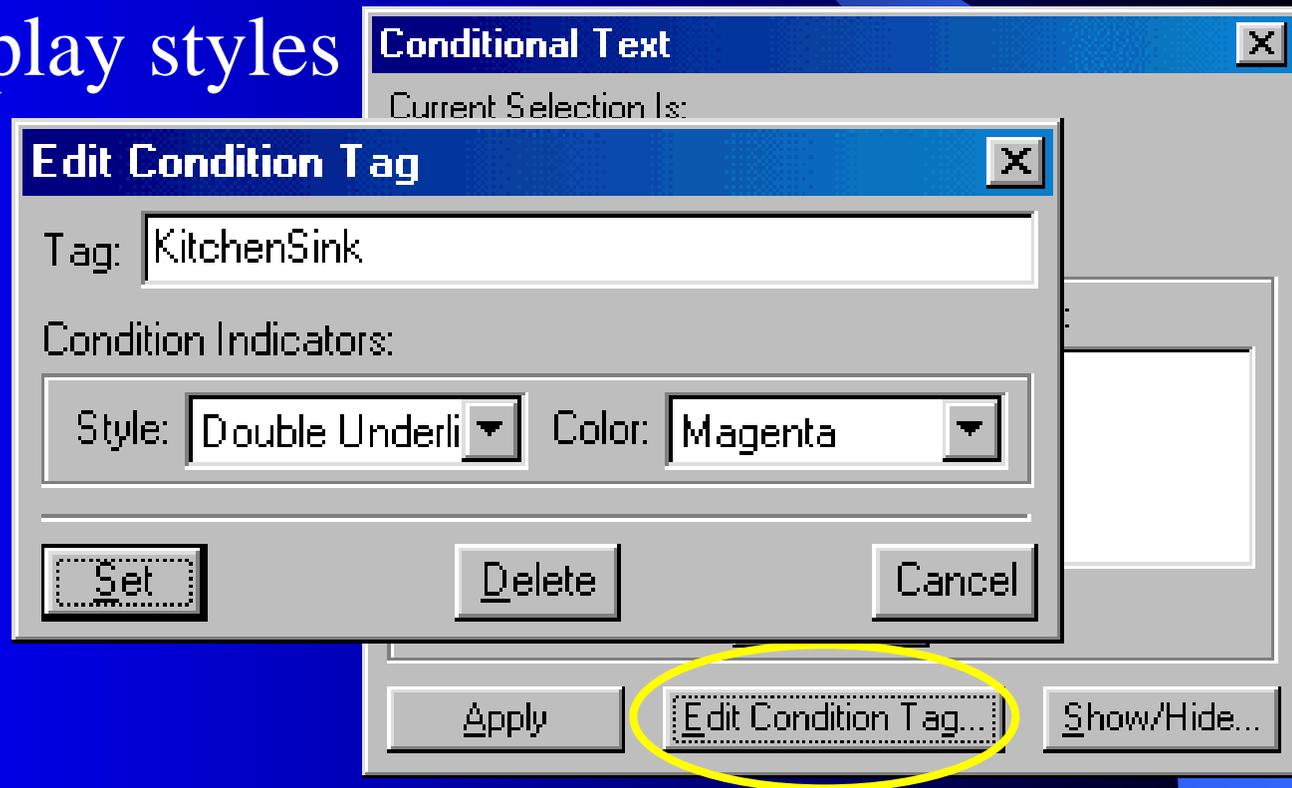

Conditional

| In: | Not In: | As Is: |
|-----|---------|--------|
| | Comment | |

<... ...>

Creating a condition

1. Click Edit Condition Tag button
2. Type condition name
3. Select display styles
4. Click Set

Viewing and hiding conditions

1. Click Show/Hide button
2. For editing, Show All and Show Condition Indicators

Viewing and hiding conditions

- For printing, Show only certain conditions and hide Condition Indicators

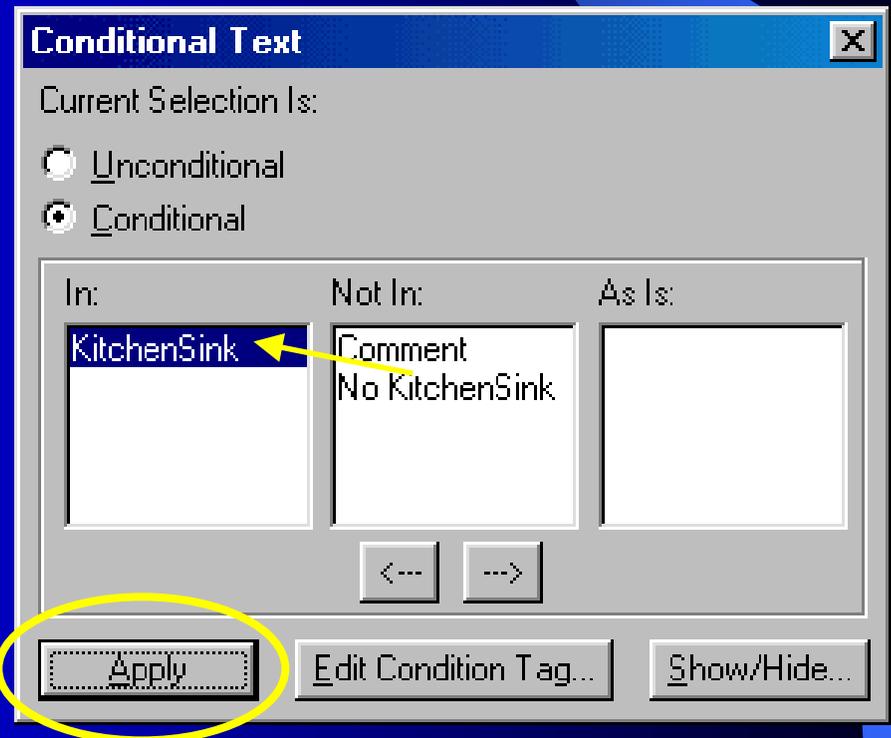

Viewing setting of selected text

- Status bar
- Special → Conditional Text

Applying a condition manually

1. Select text, marker, anchor, or table row
2. Special → Conditional Text
3. Move condition to In column
4. Click Apply

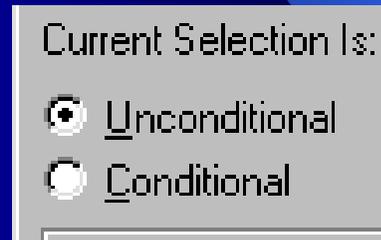

Applying a condition by pasting

1. Select text with condition you want to use
2. Edit → Copy Special → Conditional Text Settings
3. Find or select text to receive condition
4. Edit → Paste

Removing conditions

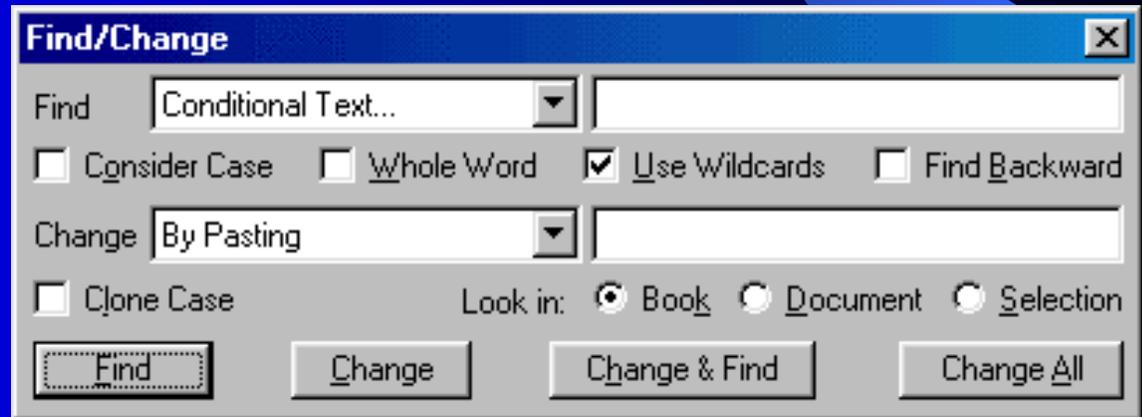

1. Select conditional text
2. Special → Conditional Text
3. Select Unconditional
4. Click Apply

Moving conditions to Not In column
and applying doesn't work

Searching for conditions

- Edit → Find/Change
- Select Conditional Text
- Move desired condition to In column
- Click Set
- Click Find

Change by Pasting in Find/Change can apply conditional settings on clipboard

Working with conditional documents

- Editing and spell checking: Show all conditions and condition indicators
- To switch settings, import conditional text settings into all files in book
- Avoid using forced page break overrides where possible – use pagination properties instead
- Always update book after making final Show/Hide settings

Next Steps

- Determine manuals that would benefit from conditional use
- Determine number of output documents and conditions
- Standardize use of conditions
